Assembly Instructions for STS-90 payload (NEUROLAB)

Building the Spacelab module

Follow the photos. Make a cylinder and glue the conical ends as photo shows. Notice how the tabs are folded.

The front end of the module without and with the conical part glued. Notice how the seam is pointing to the left. It will be covered by the part that has the Spacelab logo.

View from the aft part of the module. The small circle is glued at the back. Right photo: Notice the front end of the module before the logo parts are positioned.

Photo shows how the logo parts are positioned at the front of the module.

Left: logo parts

Right: glue the small circles on top.

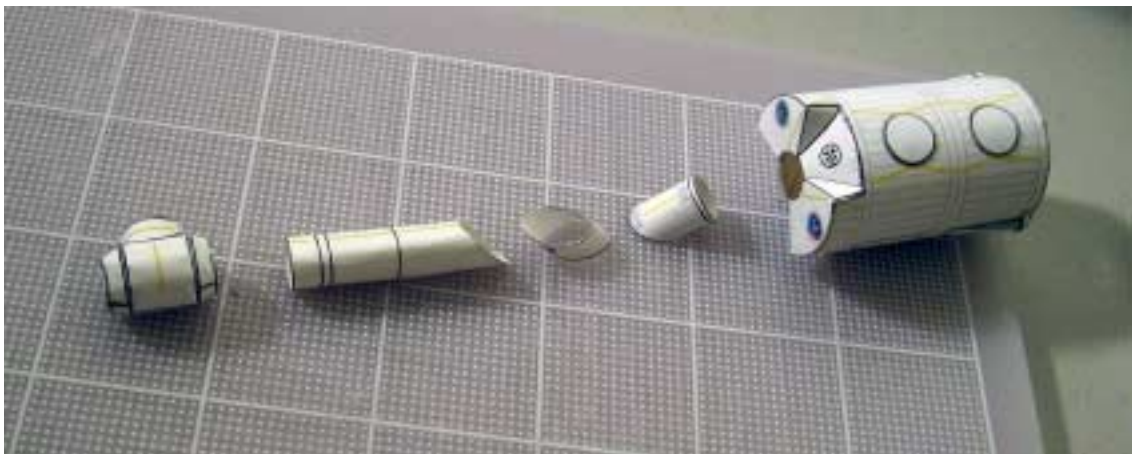

Note how these small parts are folded. These are the trunnion parts that will be glued to the sides of the module. Use the craft knife or X-acto knife for these parts.

Note how these parts are positioned to the back of the module.

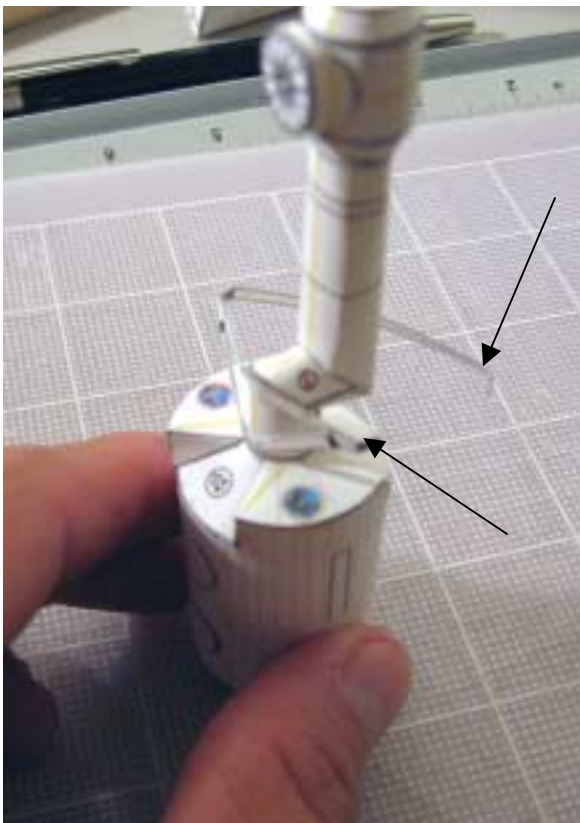

Assembly of the Transfer tunnel and the module

Follow this sequence how the parts will be glued.

Transfer tunnel is glued to the opening on the front between the logo parts.

Note how the support part is glued to the transfer tunnel. First glue the upper triangular section on the gray areas. Later, the bottom portion end is glued to the upper portion end.

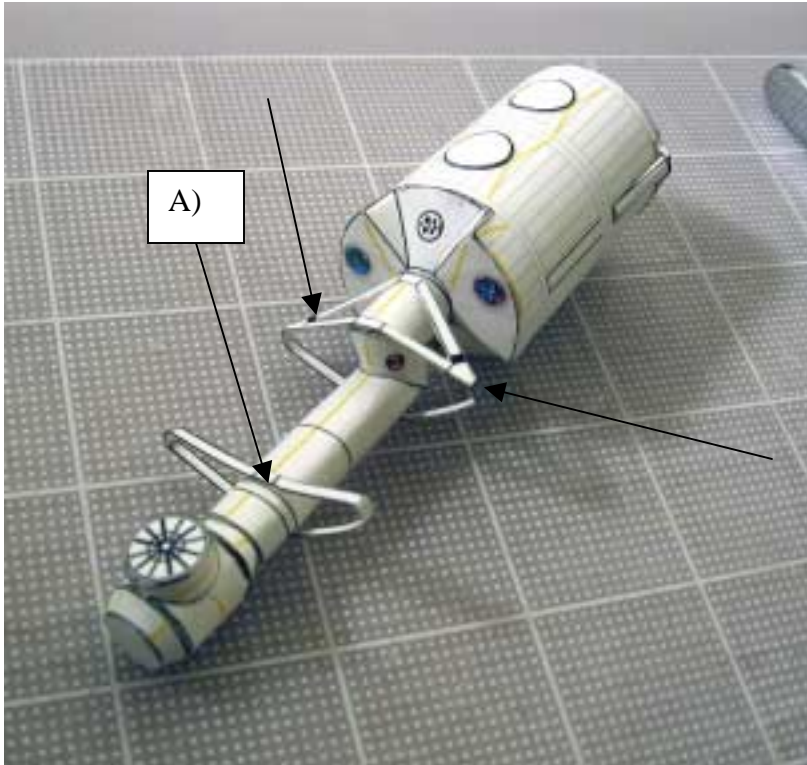

Photo shows how the support parts are glued to the transfer tunnel. A) Notice that the front support part is glued behind the second line of the tunnel. The triangular support part is bent downward as photo shows.

EDO pallet

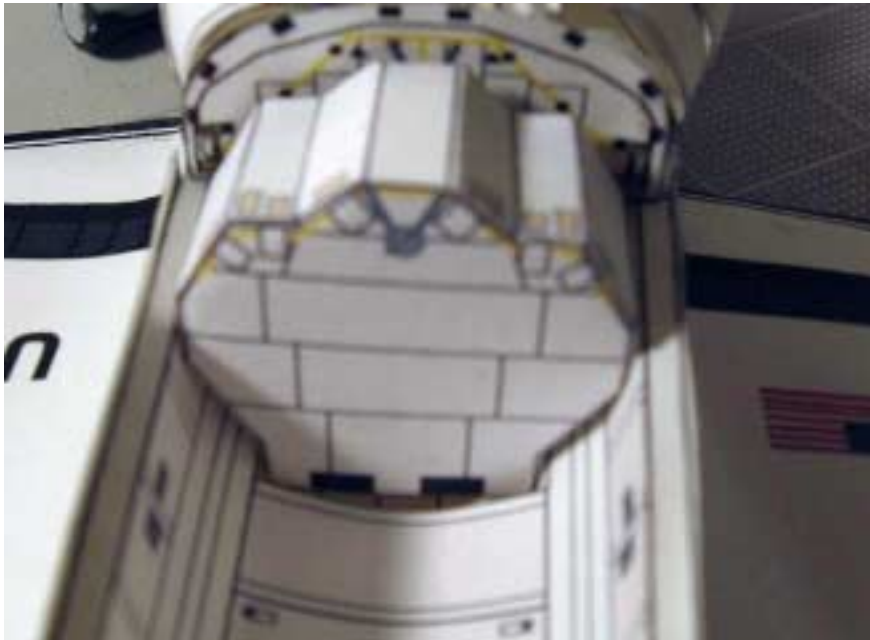

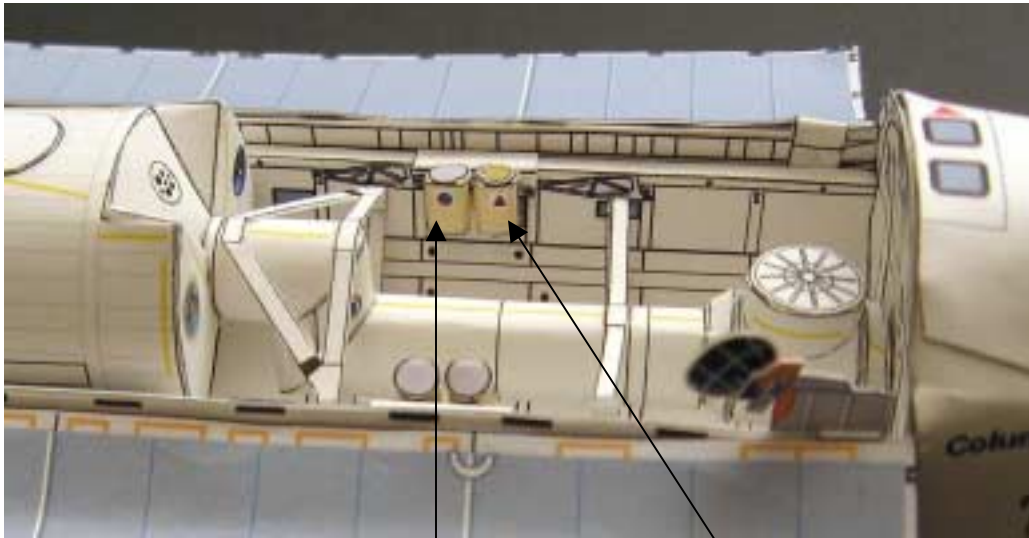

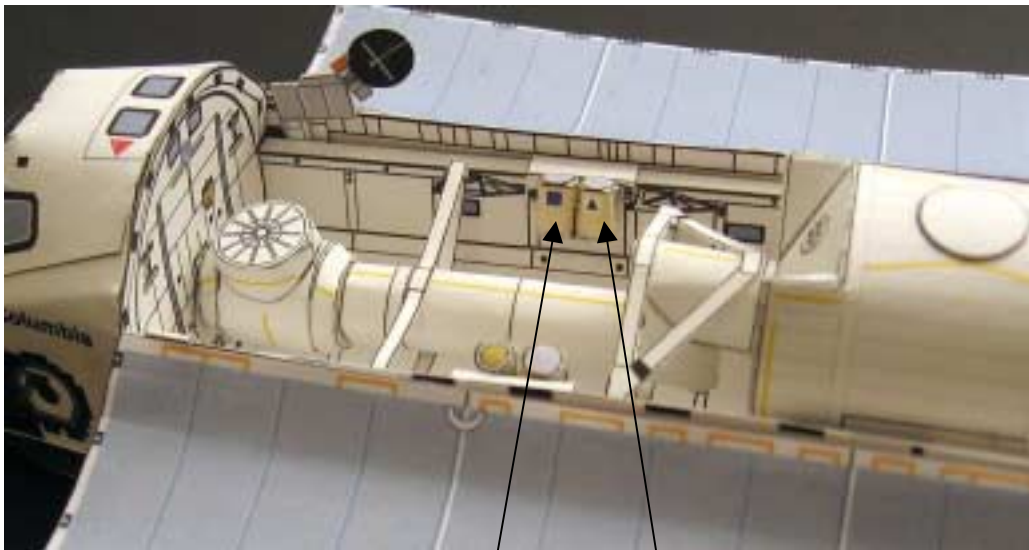

Photo shows where the EDO pallet kit is located in the payload bay.

Small payload containers

Port side of the payload bay:
G-772 (COLLIDE) left on the photo
G-744 (Ozone measurement experiment) right on the photo

Starboard side of the payload bay:
SVF (Shuttle Vibration Forces) left on the photo
G-197 (Pulse Tube Refrigerator) right on the photo

KU-band antenna

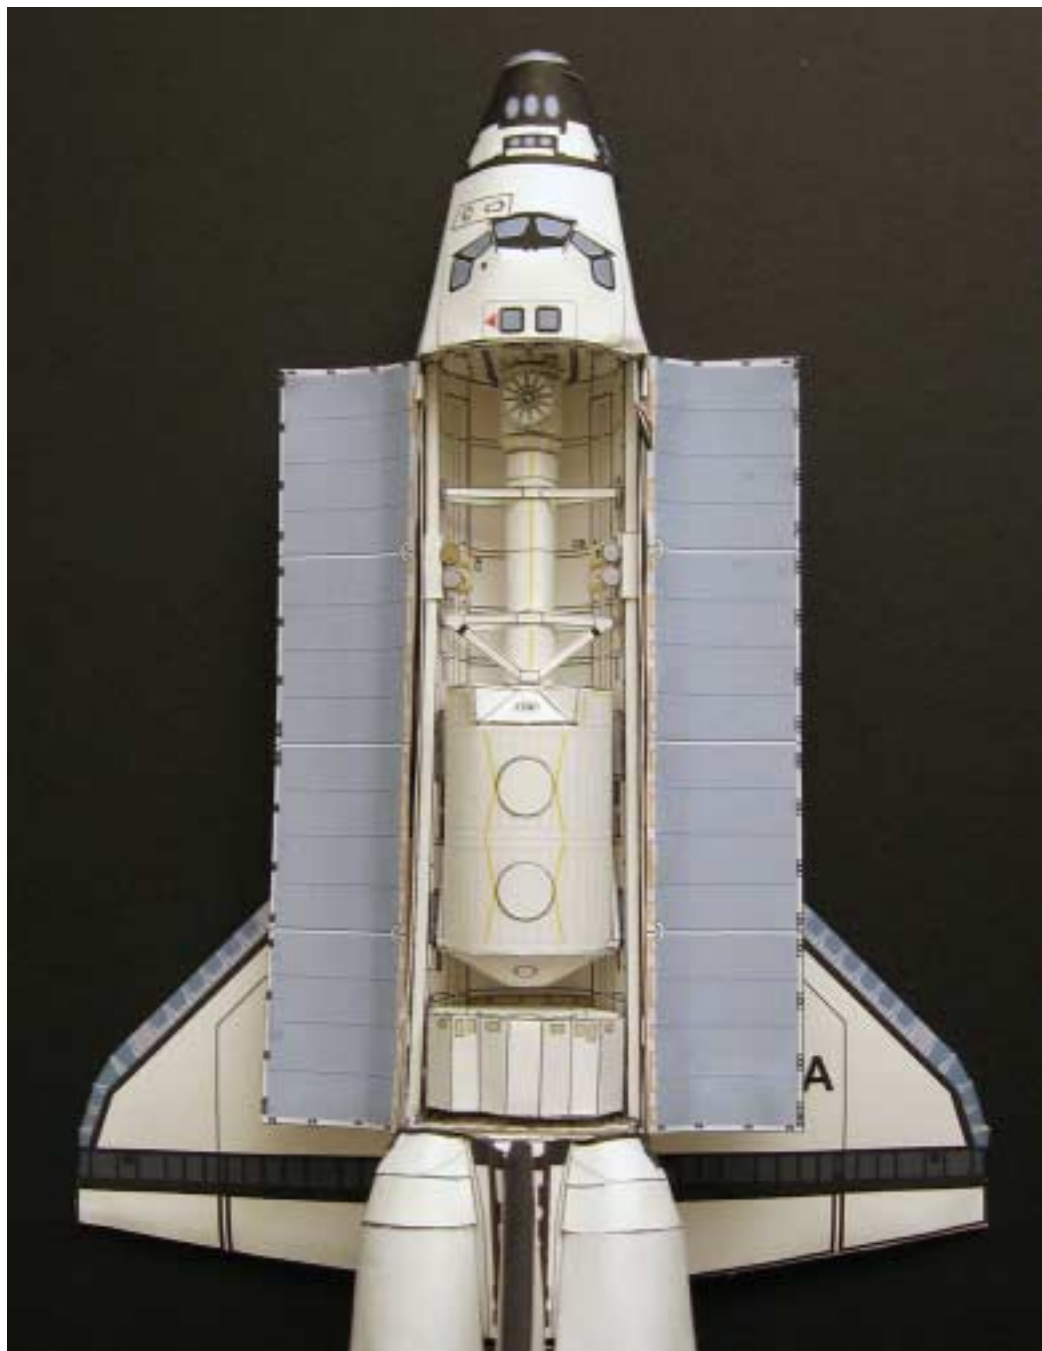

Note location of KU-band antenna that is glued on the tab from the right payload bay door.

Photos for reference:

Enjoy this model!
