STRELA ARMS Assembly Manual (For PIRS and POISK)

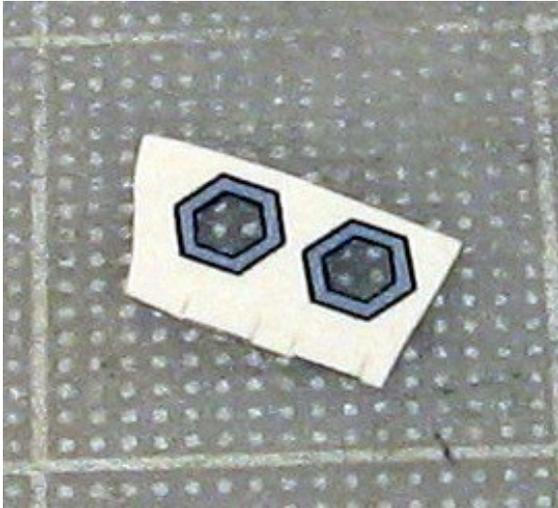

The assembly steps on this manual refer mainly to the 1:100 scale version of the Strela arms. This applies for both PIRS and POISK russian modules.

IMPORTANT: THIS ONLY APPLIES FOR STRELA 1 ARM.

Before I designed the Strela Arms, the location marker for Strela 1 on PIRS and POISK was put incorrectly. Based on real photos and diagrams it was noticed that the Strela arms on the real modules are not located at the same level, instead, Strela arm 1 is placed almost in the center of the module and Strela arm 2 is placed above the center.

For all the visitors who have already built either PIRS or POISK, in order to correctly place Strela arm 1, there is a small patch that needs to be glued on the module first. This way, Strela 1 will be correctly glued to the module. The location for Strela arm 2 is correct.

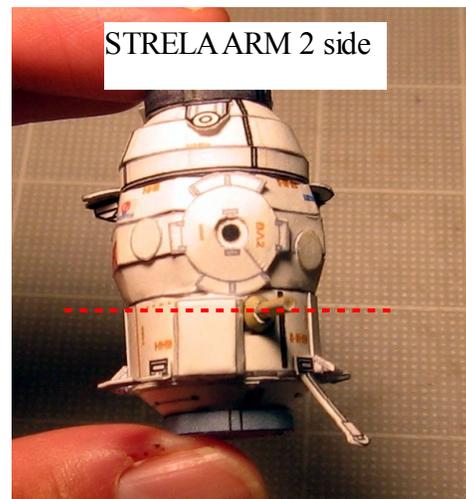

For NEW visitors, disregard this “patch” and download the revised files for PIRS and POISK.

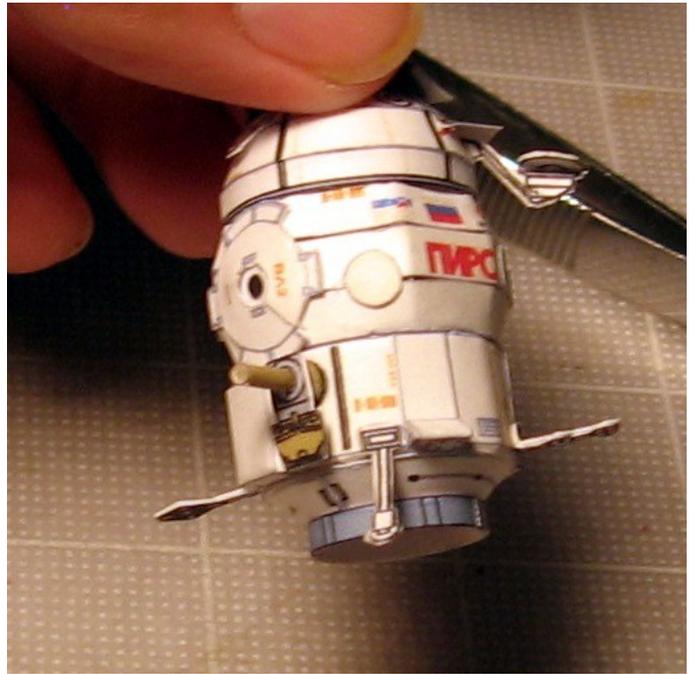

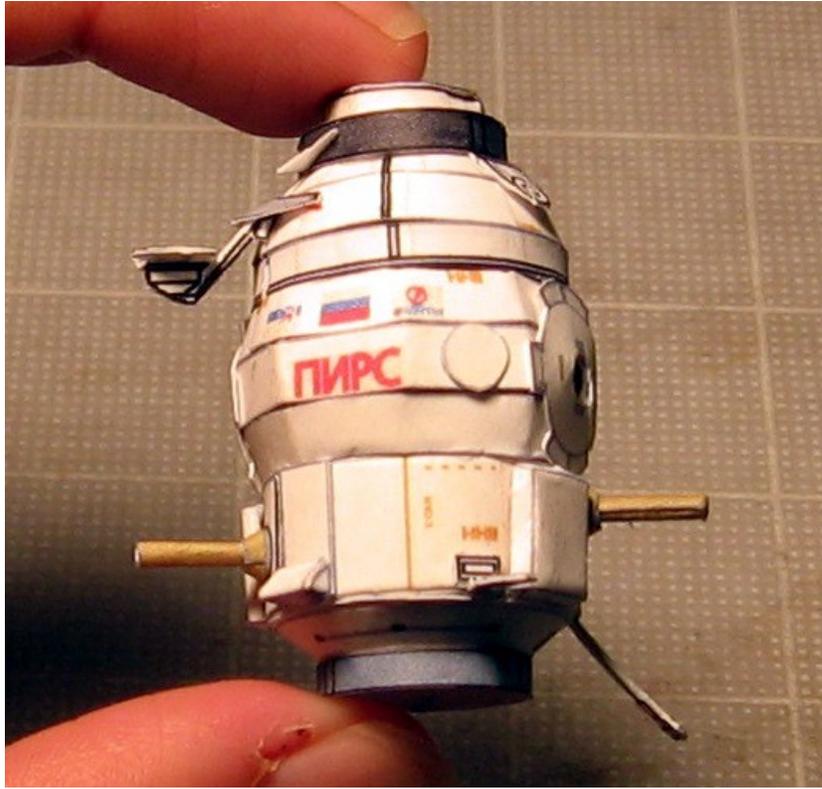

The original files for both scale versions of PIRS and POISK have been revised with this new information.

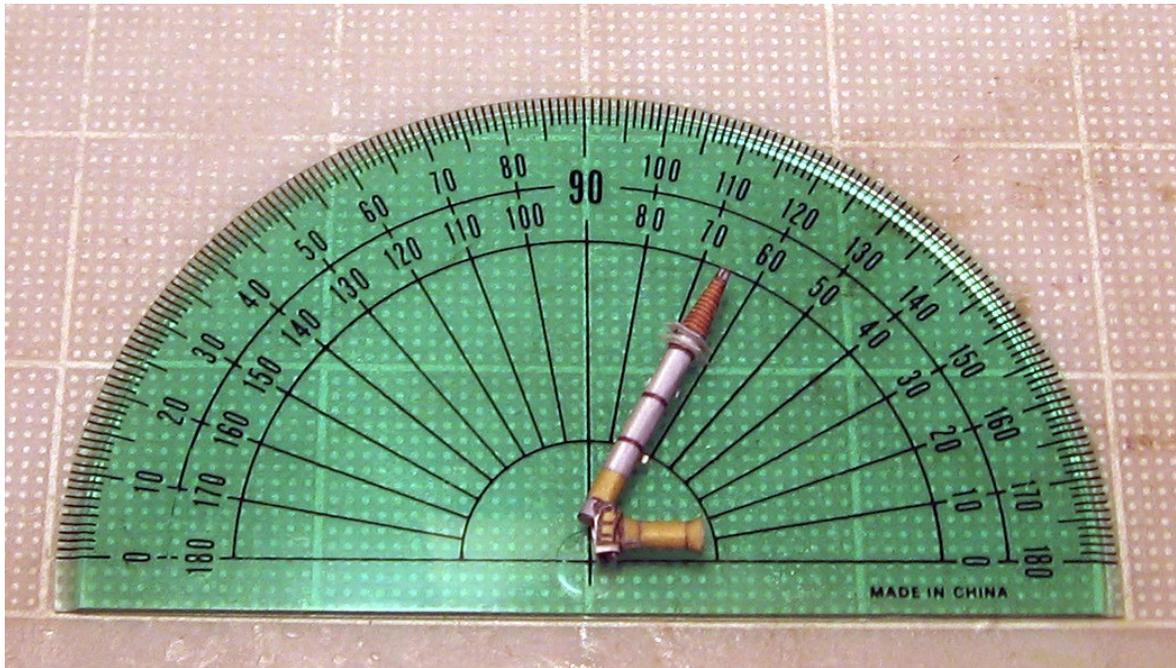

Photos below demonstrate the difference of the Strela arms location.

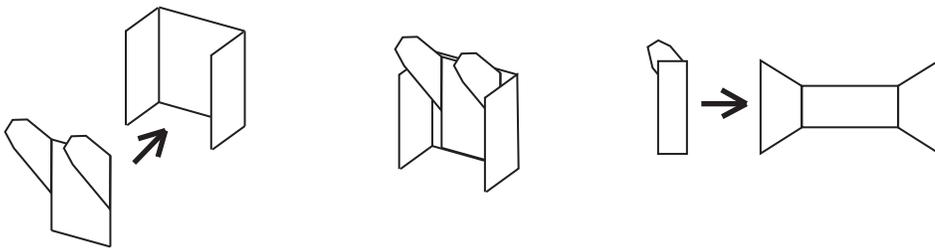

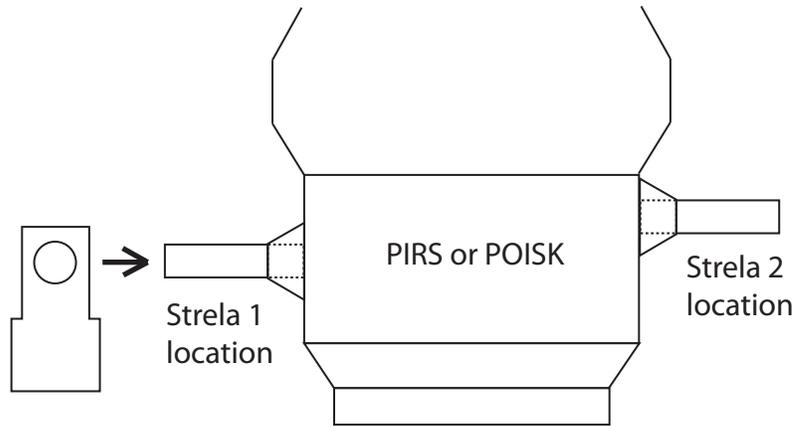

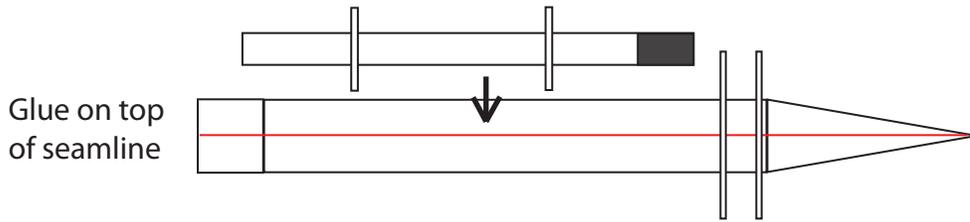

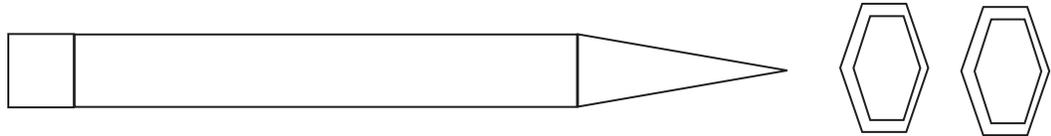

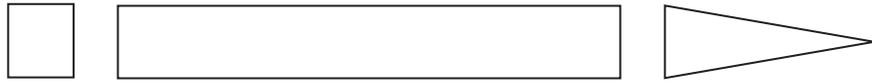

The above photos correspond to the Strela Arm 1 side, easily recognized by the small yellow circle on top. Photo on the left is the original design. Photo on the right is after the patch being glued. Notice the gray circle more to the center of the lower part of the module.

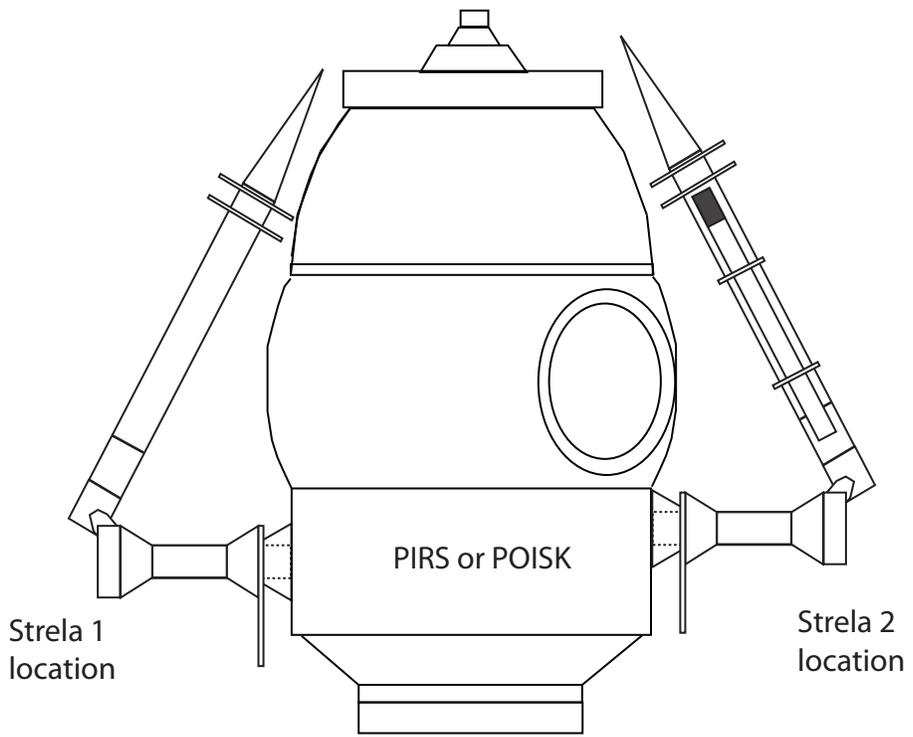

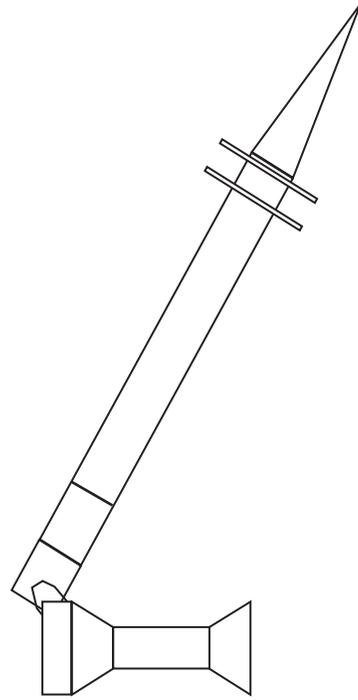

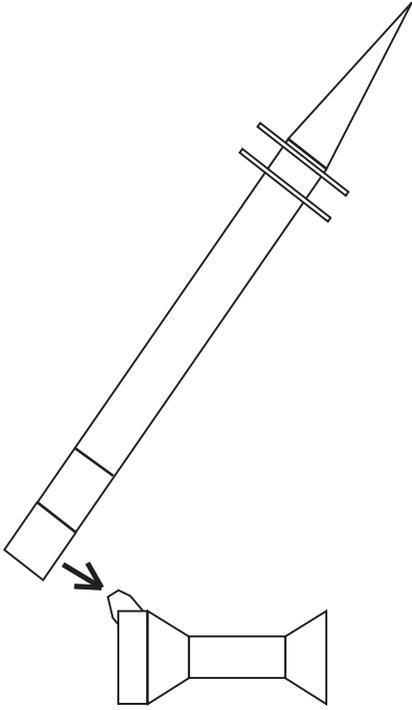

1:100 STRELA ARM Assembly Steps (PIRS and POISK)

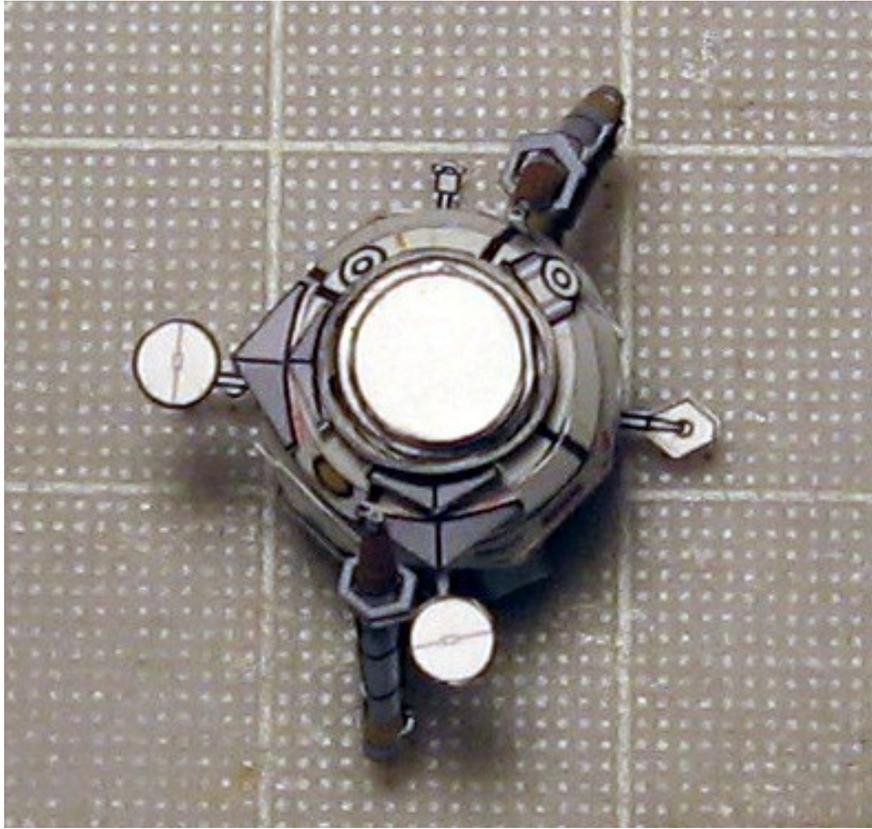

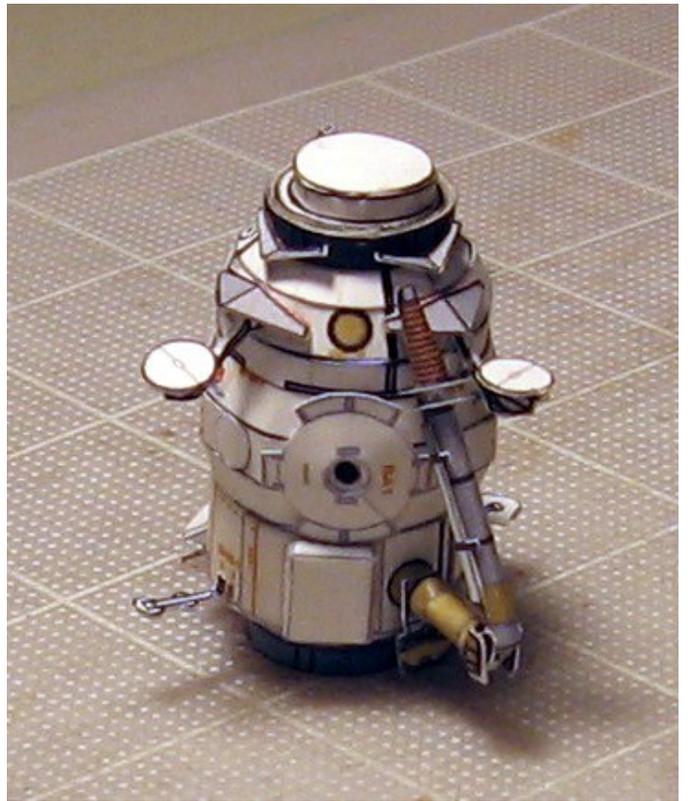

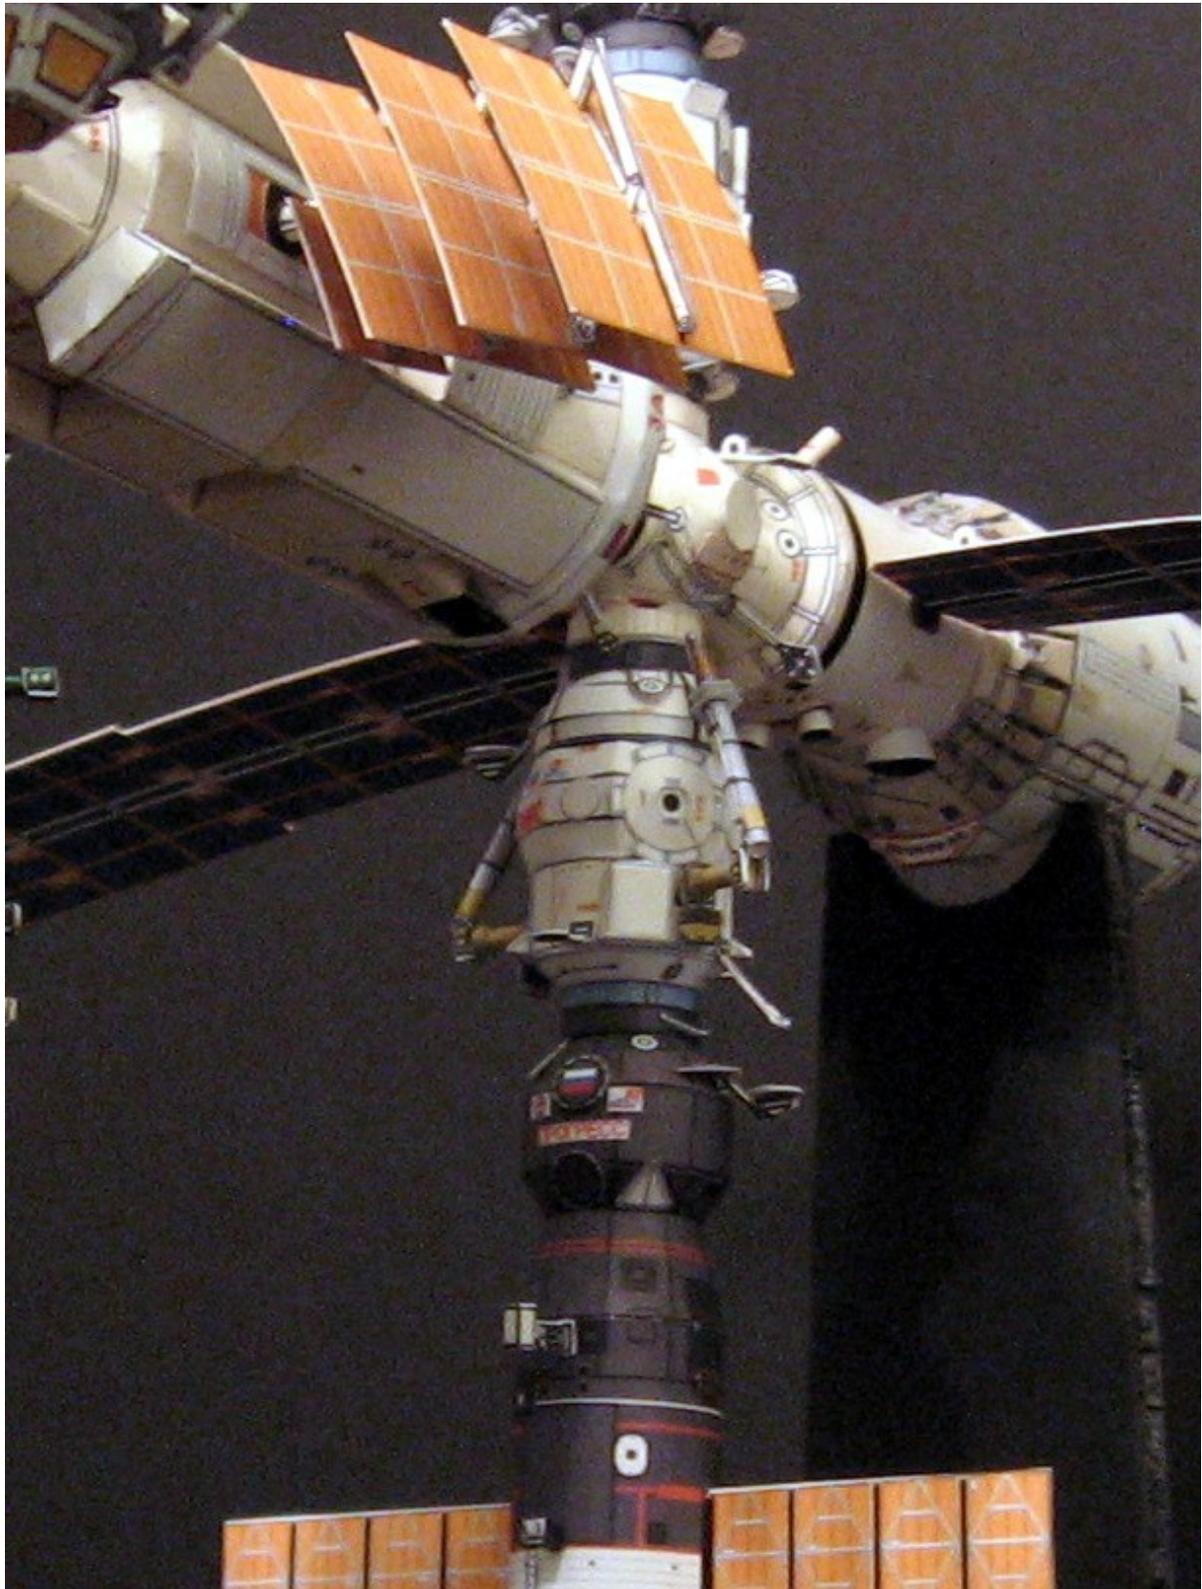

STRELA ARMS FOR 1:144 SCALE VERSION
